We pioneered
a clubfoot brace that became
**THE ACCEPTED
STANDARD-OF-CARE.**
Through ongoing innovation,
we continue to perfect it.

For over 16 years, we have been
**PARTNERING WITH
PHYSICIANS AND PARENTS**
to create cutting-edge devices that make the
clubfoot journey easier for everyone.

Our commitment to
**COMFORT, CONFIDENCE
AND PARENTAL PEACE OF MIND** guides
clubfoot children and families along the path to
life-changing results.

As the designer and manufacturer of products, MD Orthopaedics does not provide medical treatment, advice, or information. Information about the risks and benefits of medical treatment, including treatment that involves the use of MD Orthopaedics' products and available alternatives is provided solely by physicians or other health care providers.

If you have questions about your child's treatment, it is important to discuss those questions with the appropriate health care provider.

MD Orthopaedics does not, and cannot, warrant certain results from the use of its products.

More Comfort

About Us

Guiding journeys, transforming lives and shaping the future with comfort and compassion — when MD Orthopaedics began our work to improve non-surgical clubfoot treatment in 2004, these goals are what drove us forward.

We knew better was possible, and that families deserved nothing less. Through collaborative work with industry pioneer, Dr. Ponseti, better was born.

17 years later, our commitment to quality products and education has not wavered. We continue to lead the way toward life-changing results for children and the families who walk with them.

Customer Care is Our Business

At MD Orthopaedics we offer a family-centered approach to customer service. Our staff has worked with more than a half million mothers and fathers to achieve successful treatment for their children.

We are ready to assist in every step of the healing journey. Our customer support team is your partner during your family's clubfoot journey.

Mitchell Ponseti

Bryce Alan Flurie/ CURE International

What is Clubfoot?

A: Clubfoot (also called *talipes equinovarus*) is a general term used to describe a range of unusual positions of the foot. Each of the following characteristics may be present, and each may vary from mild to severe:

- The foot (especially the heel) is usually smaller than normal.
- The foot may point downward.
- The front of the foot may be rotated toward the other foot.
- The foot may turn in (known as inversion), and in extreme cases the bottom of the foot can point up.

Most types of clubfoot are present at birth (congenital clubfoot). Clubfoot can occur in one foot or both feet. In almost half of affected infants, both feet are involved. Although clubfoot is painless in babies, treatment should begin immediately, as delaying therapy can cause significant problems as the child grows. With early treatment, most children born with clubfoot are able to lead normal lives.

MD ORTHOPAEDICS
QUESTIONS AND ANSWERS

Bryce Alan Flurie/ CURE International

What is the Ponseti Method?

A: The Ponseti Method is a nonsurgical treatment process that was developed by Dr. Ignacio Ponseti. The method utilizes a series of casts that gradually move the foot to the correct position. Each week the cast is removed and replaced with a new cast.

www.mdorthopaedics.com

877-766-7384

Mitchell Ponseti

Pioneering with Dr. Ignacio Ponseti

Dr. Ignacio Ponseti, an orthopedist from Spain, created the nonsurgical method of correcting clubfoot. His years of experience convinced him that surgical methods of repairing clubfoot actually harmed children.

Over the years, as he worked at the University of Iowa, his research showed promise. What is now known as the Ponseti Method is applied in several phases of treatment (see "Clubfoot Journey" on page 7). This procedure is now considered the touchstone method for treating clubfoot patients around the world.

Today the Ponseti Method is successful in 95% of clubfoot cases worldwide, and since the turn of the century, surgery for clubfoot has declined by as much as 90%.

John Mitchell, inventor and president of MD Orthopaedics, began work at Ponseti's urgent request for a "boot and bar" orthopedic to marry with Ponseti's famed non-surgical procedure called the Ponseti Method.

"The shoes available were very inadequate, they were made with stiff soles poorly molded to the foot. And after the treatment you need to have comfortable shoes for the babies to sleep at night and to use in the middle of the day during napping hours. And I was really, again, very desperate trying to find a shoe that would fit the babies with comfort. And here, I talked to John... Of course he was acquainted with plastics and modern technologies that I had no idea of. And he on his own developed this excellent shoe that I needed particularly for difficult feet that we call complex feet and it has been a Godsend really because it has solved the problem of after-treatment of the deformity."

-J.V. Ponseti, MD

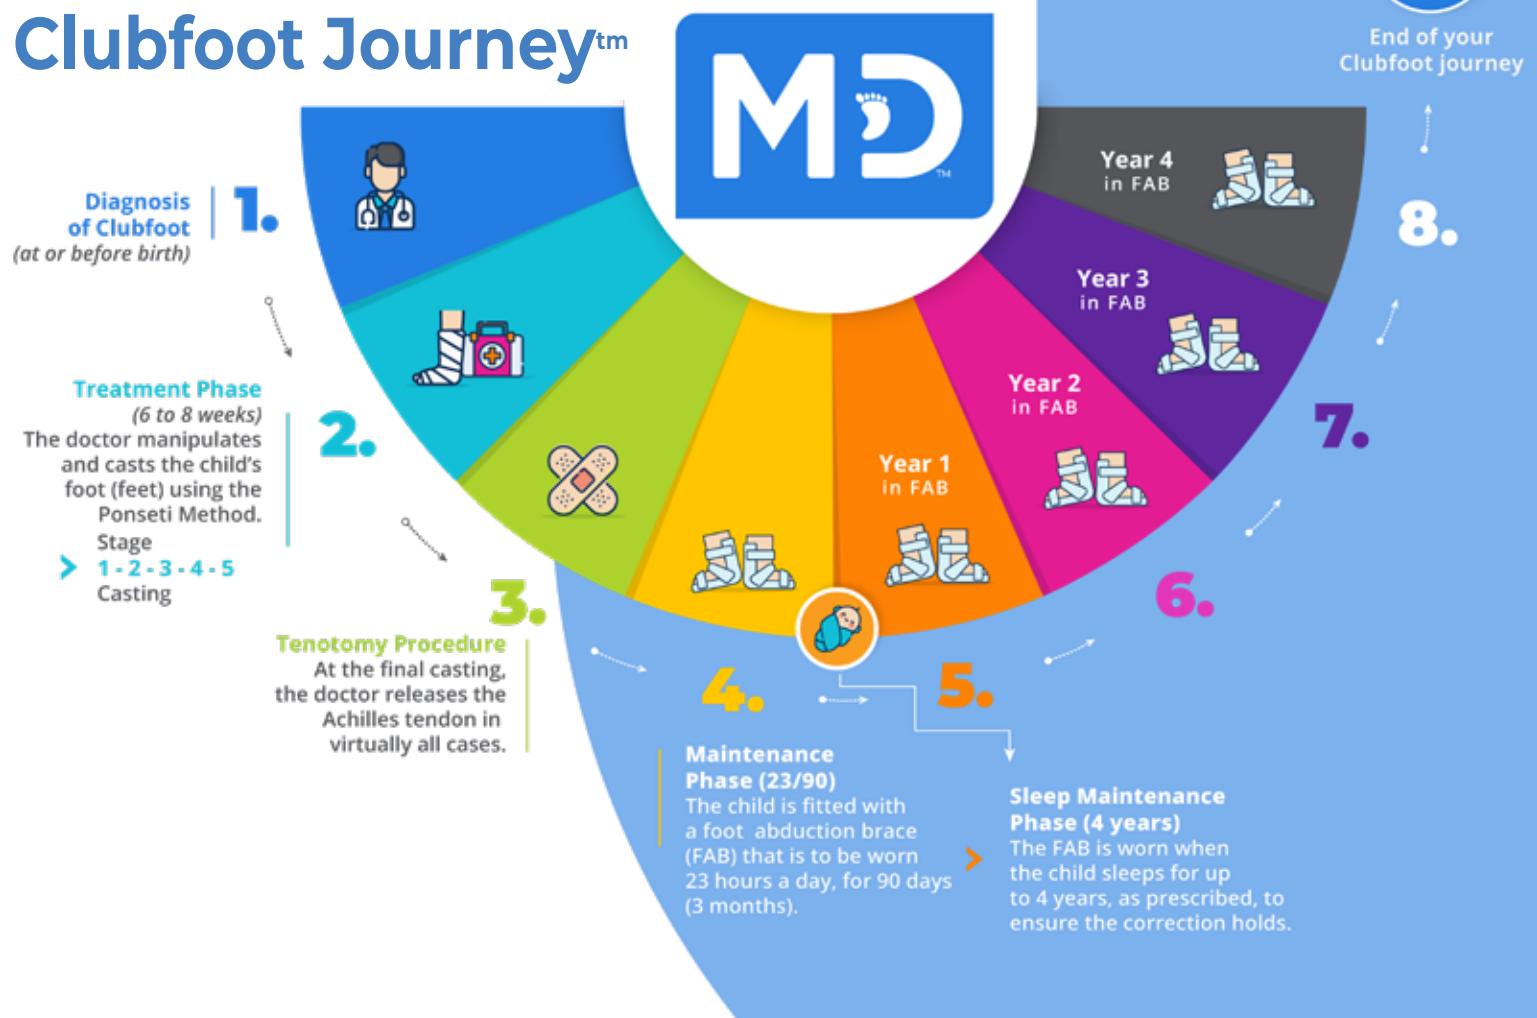

Dr. Ponseti and John Mitchell with the Mitchell Ponseti® AFO

STANDARD MITCHELL PONSETI® AFO

Standard ankle foot orthotic for use with the Ponseti Method of clubfoot correction. Our patented system features a soft lining for comfort and compliance, and soft synthetic leather straps. The location of the heel can easily be seen through two holes in the back of the AFO and the footwear attaches to the Mitchell Ponseti® Bar (sold separately), in accordance with the standard Ponseti bracing protocol.

Available in sizes preemie through 12.

Please call for pricing

*Recommended code - L1930

Standard Mitchell Ponseti® AFO

- patented, high-quality footwear system based on the Mitchell Ponseti® Method
- straps & soft synthetic leather body
- increased heel visibility
- easy locking and releasing of footwear, which attaches to the Mitchell Ponseti® Bar
- dorsiflexion built into abduction bar

Patented —
comfort lining

Durable, no-
rip straps and
secure, riveted

MITCHELL PONSETI® AFO PLANTAR FLEXION STOP

PFS
P: Plantar
F: Flexion
S: Stop

The articulated Plantar Flexion Stop limits plantar flexion with rigid dorsiflexion to maintain the prescribed position of the foot. Recommended for the complex clubfoot. This device is also good for children with hyperflexible feet as it ensures the foot is always held in a neutral or dorsiflexed position.

Available in sizes 00 through 12.

Please call for pricing

*Recommended code - L1971

Mitchell Ponseti® AFO PFS

- developed for children with hyperflexible feet
- includes all the basic features of the Standard Mitchell Ponseti® AFO

Special features include:

- plantar flexion stop for limiting motion
- rigid dorsiflexion to hold foot in prescribed position

Plantar Flexion Stop

Attached to back of AFO

SOLUTIONS
 MITCHELL PONSETI® AFO

TS
T: Toe
S: Stilt

MITCHELL PONSETI® AFO TOE STILT

The Toe Stilt AFO was specifically designed by recommendation of Dr. Ponseti to maintain clinically desirable dorsiflexion by stretching the Achilles tendon and helping to keep the foot flexible. This is achieved by the placement of a built in wedge attached to the front of the AFO which keeps both feet in a dorsiflexed position of 10 degrees when standing. The patient must be able to stand independently for the Toe Stilt AFO to have any effect when used without the Mitchell Ponseti® bar.

Available in sizes 2 through 11.

Please call for pricing

*Recommended codes - L1930 , L3380

Mitchell Ponseti® AFO TS

- includes all the basic features of the Standard Mitchell Ponseti® AFO

Special features include:

- designed to promote dorsiflexion
- permanent 10-degree wedge attached to front of AFO

Mitchell Ponseti.

MITCHELL PONSETI® AFO PLANTAR FLEXION STOP/TOE STILT

The Plantar Flexion Stop/Toe Stilt is a dual purpose AFO that supports the Ponseti Method of treating clubfoot. The AFO is worn attached to the Mitchell Ponseti® Bar in accordance with the standard Ponseti bracing protocol. The Plantar Flexion Stop (PFS) is designed to structurally limit any plantar flexion and works particularly well in clubfoot cases with hypermobile or corrected atypical/complex deformity. The PFS is mounted on the standard shoe during the assembly process but is designed to be custom fit as necessary by orthotists to meet the dynamic needs of each clubfoot child. The toe stilt encourages lower calf, Achilles tendon and plantar fascia stretch in the toddler who can stand independently without the Mitchell Ponseti® Bar. The Toe Stilt holds both feet at 10 degrees dorsiflexion when standing.

MITCHELL PONSETI® CLUBFOOT MODEL

Medical teaching model to demonstrate proper correction of clubfoot deformity. Errors in the manipulation of the congenital clubfoot can easily be demonstrated with this model.

Please call for pricing.

CAST APPLICATION RUBBER LEGS & STANDS

These anatomic models are soft and pliable, with finger placement etchings to demonstrate the proper positioning for manipulation.

These legs also serve as the teaching models for the proper application of plaster casts at each stage to maintain the correction obtained by manipulation.

Please call for pricing.

Stage 1 - left & right

Stage 2 - left & right

TENOTOMY MODEL

Provides a visual of the anatomic relationship of the Achilles tendon. This model is also a useful visual aid when discussing the procedure and expected results with the parent.

Please call for pricing.

FIVE STAGE CAST MODEL

The Cast Model allows visualization of the completed cast at each of the five different stages of the Ponseti Method, with emphasis on bony landmarks and the toe platform.

Please call for pricing.

PRODUCTS
TRAINING

TENOTOMY PRACTICE MODEL

The Ponseti method of clubfoot correction includes surgical transection of the Achilles tendon to correct for the equines deformity. The MD Orthopaedics "Tenotomy Practice Model" is designed for physicians and providers, trained in the Ponseti Method, to practice the necessary steps involved with the tenotomy procedure. The model is designed to accurately identify anatomic landmarks both positionally and palpably. The base foot

mold is representative of a six month old baby's foot. The model can be practiced both in the posterior upright or lateral position based on surgical preference. The synthetic skin and tendon material are designed to give appropriate feel and palpable feedback of the completed transection.

The kit includes:

- | | |
|----|-------------------------------------|
| 1 | base foot mold |
| 50 | synthetic tendons |
| 10 | rubber bands (neurovascular bundle) |
| 2 | synthetic skin overlays |

Refill Kit Also Available Please call for pricing.

NEW VERTICAL TALUS MODEL

Understanding of the anatomical relationships of the vertical talus deformity, from either congenital or iatrogenic etiology, is critical in assessing treatment options whether conservative or surgical. The Vertical Talus Model was designed to give the proper anatomic orientation and relational disposition of the typically rigid, irreducible talonavicular dislocation that defines the deformity. The model is representative of a child six months of age. The model includes a gray colored talus bone for instructional orientation and the "NO" directive, by Dr. Ponseti himself, over the calcaneo-cuboid joint.

Please call for pricing.

www.mdorthopaedics.com

877-766-7384

Mitchell Ponseti®

MITCHELL PONSETI® TRAINING KIT

For new practitioners of the Ponseti Method, it can be difficult to visualize the internal aspect of the clubfoot deformity, palpate anatomic correction endpoints or know just where to place the hands for effective manipulation.

The Mitchell Ponseti® Training Kit provides the visual and tactile training tools needed to give practitioners the confidence to treat typical and atypical clubfoot on even the smallest patient.

The rubber models are made from synthetic materials that replicate the look and feel of an infant clubfoot – and are easy to clean. The Talus bone model includes a gray colored talus bone for instructional orientation and Dr. Ponseti's "NO" directive over the calcaneo-cuboid joint.

All models are representative of a child six months of age unless otherwise specified.

Please call for pricing.

The Training Kit contains:

- Rubber Legs (Right Stage 1 - Right Stage 2 - Right Stage 3 - Right Atypical)
(Legs 1 and 2 with Finger Placement Etchings)
- Bone Models
(Right Clubfoot, Adult and Left Talus, Child)
- Tenotomy Model
- The complete Tenotomy Practice Model Kit
- Cast Models (Stages 1, 3 and 5)
(1 and 5 with Finger Placement Etchings)
- Size 0000 AFO and Extra Short Bar
- A 23 in x 18 in x 11 in wheeled suitcase with custom-cut foam inserts to protect the models

MAKING AN IMPACT ON GLOBAL PONSETI METHOD TRAINING

MD Orthopaedics is dedicated to training the next generation of clinicians on the ground-breaking Ponseti Method, and we provide a variety of anatomical training models to better equip physicians, orthotists, prosthetists, and other Ponseti Method practitioners around the globe.

These tools allow practitioners the hands-on training they need to perform the manipulations, casting and tenotomy procedures that the Ponseti Method recommends.

MDO Training Models in use:

1. Mitchell Ponseti® Clubfoot Model
2. Cast Application Rubber Legs
3. Tenotomy Model
4. Five Stage Cast Set
5. Tenotomy Practice Model
6. Talus Model

A few of the organizations the MD Orthopaedics training aids have served:

- Ponseti International
- Global Clubfoot Initiative
- Shriners Hospital Canada
- Children's Hospital of Michigan, Philadelphia, and Wisconsin
- Cure International
- Mercy Ships
- Miracle Feet
- University of Florida
- University of Michigan
- University of Oklahoma
- University of Texas
- The Nemour Foundation

What Doctors are saying...

"The {MD Orthopaedics} training models have been revolutionary, I carry them around in my bags now all over the world when I go training..."

- **Dr. Norgove J. Penny, MD** Orthopedic Surgeon, the Pediatric Orthopedic Society for Africa

"The models are a great teaching tool, without them you just can't teach..."

- **Dr. John E. Herzenberg, MD** Director of Pediatric Orthopedics at Sinai Hospital, Baltimore, MD

"Absolutely fundamental to my training..."

This is a superb model to demonstrate the Ponseti method technique."

- **Dr. Stephen Mannion, MD** Consultant Orthopedic Surgeon, CBM, NHS

CLUBFOOT CHRONICLES

by Maureen Hoff

Clubfoot Chronicles is a landmark reference guide written to help parents grappling with the realities of the clubfoot diagnosis and treatment journey. Offering specific advice based in real-world experiences, Clubfoot Chronicles was written to guide parents to the answers they seek while giving the reassurance they need to succeed. Written by an experienced parent, the book is easy to read, informative, and full of helpful tips and heartfelt insights that any clubfoot parent can relate to.

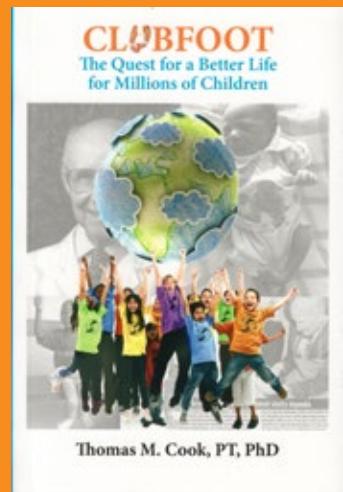

Price \$14.95

CLUBFOOT: THE QUEST FOR A BETTER LIFE FOR MILLIONS OF CHILDREN

by Dr. Thomas Cook

Clubfoot: The Quest for a Better Life for Millions of Children tells the little-known story of the world's most common skeletal birth defect and development of a revolutionary method for eliminating lifelong disability for the 200,000 children born every year with this deformity. The hero of this story is Dr. Ignacio Ponseti (1914-2009) who, as a young physician, became enmeshed in the Spanish Civil War before being forced into exile in France and then Mexico. He eventually found a home in the heartland of America where, despite opposition from the medical establishment, he began a life-long quest to reshape children's futures from lives of pain and disability to lives of hope and promise. Because of Dr. Ponseti's quest, and the many healthcare professionals, parents, and other advocates who have taken it up, a normal, disability-free life is now possible for hundreds of thousands, if not millions, of children. This book answers three questions. Who was Ignacio Ponseti? What is the treatment he developed? How successful is his quest?

BOOKS

THE PARENT'S GUIDE TO CLUBFOOT

by Betsy Miller

Written in everyday language, the book covers clubfoot in babies and older children from diagnosis through treatment for mild to severe cases. It provides details on clubfoot, its causes, treatment and care, along with an extensive list of resources and clubfoot assessment aids. In keeping with currently preferred treatments in the U.S., it emphasizes the Ponseti Method, which minimizes surgery, and includes perspectives from Ponseti-trained clubfoot doctors and parents of children with clubfoot. However, separate chapters discuss all pre-treatment and post-treatment care options and one chapter covers surgery and post-surgery care if it becomes necessary.

MY CLEVER NIGHT-NIGHT SHOES

by Karen Moss, Illustrated by Lori Bentley

My Clever Night-Night Shoes is the perfect bedtime story for children who sleep with boots and bar, encouraging Ponseti kids to wear their specially designed 'night-night' shoes because it is a crucial part of their treatment and the results are well worth it.

Written by a mom with first-hand experience of a strong-willed child who sometimes had to be convinced to wear his brace, this light-hearted, inspiring and comforting story describes the exciting jobs that different shoes have, and that wearing the brace enables them to do anything they want to do.

HIP, HOP, HOORAY FOR BROOKLYNN!

by Jill Harold and Betsy Miller

This upbeat story is about Brooklynn, a little bunny who loves to hop. Brooklynn wears a brace at night, but she is determined to learn how to hop rope in time for the Hippity Hop Games. Armed with hop rope rhymes and a can-do attitude, Brooklynn shows that persistence pays off and can be a lot of fun.

MEASUREMENTS FOR SIZING MITCHELL PONSETI® AFOS

	Left (cm)	Right (cm)
A		
B		

M D ORTHOPAEDICS
GENERAL INFORMATION

FREQUENTLY ASKED QUESTIONS

Do the buckles go to the inside of the foot or to the outside of the foot?

The AFO was designed with the buckles set to the inside of the foot. This design feature is to aid parents in the donning and doffing of the AFOs. Ponseti experts do allow buckles to the outside of the foot based on professional preference or customer convenience. It will not alter the performance or risk of injury by orienting the buckles outward.

I just received my order, and the AFOs seem too big/too small. Is there a different size that would work better?

Contact your point of purchase

The child's heel is not down in the AFO. Is something wrong?

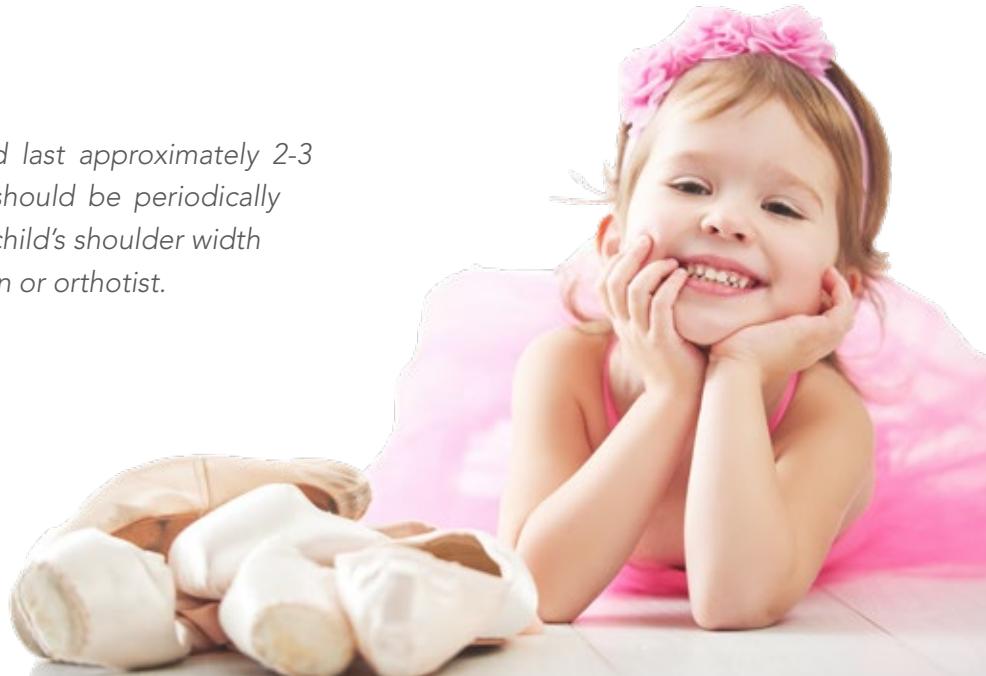

If the heel is not visible in the heel opening, check with your physician to ensure the clubfoot is fully corrected. If the physician indicates that the correction is good, it may not be necessary to force the heel down into the AFO, as this can lead to skin irritation, bracing discomfort, and reduced bracing compliance.

How long will each pair of AFOs last?

On average, an AFO will last 3-9 months. Some children grow rapidly and will need new AFO's within three months. As the child's growth rate slows, more time can be expected from each AFO.

How long will the bar last?

The bars are adjustable and should last approximately 2-3 iterations of AFOs. The bar width should be periodically checked and adjusted to match the child's shoulder width or as recommended by your physician or orthotist.
